

Ok, so if you've been involved in the AI image discourse, you may have heard about Bing AI's "ethnically ambiguous" issue.

As far as I understand, the AI sometimes injects the phrase "ethnically ambiguous" into your prompt to avoid racially biased answers.

This can lead to "ethnically ambiguous" showing up as text in your results.

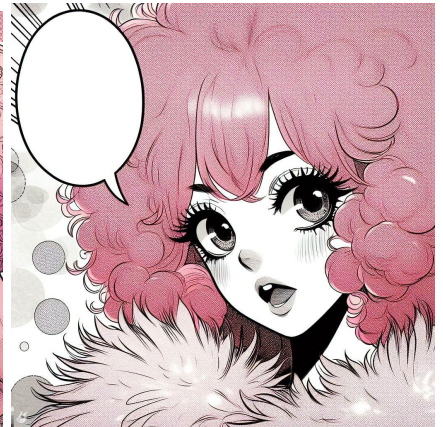

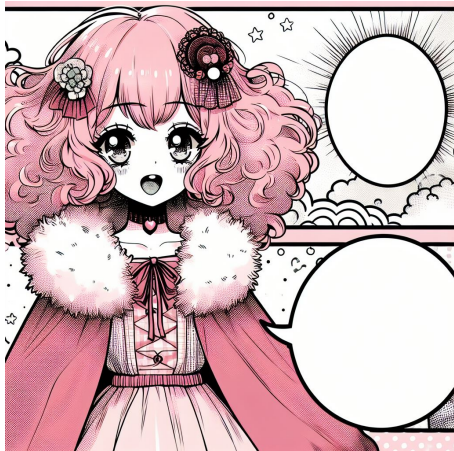

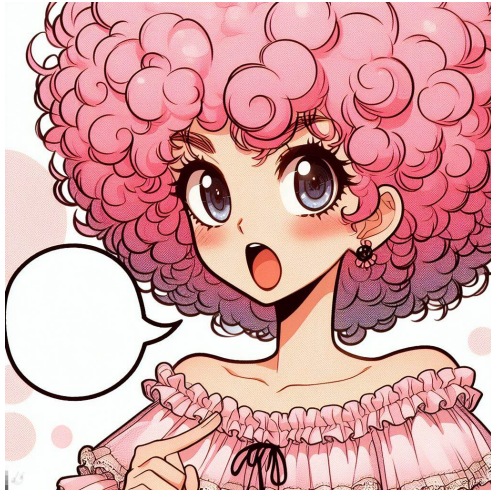

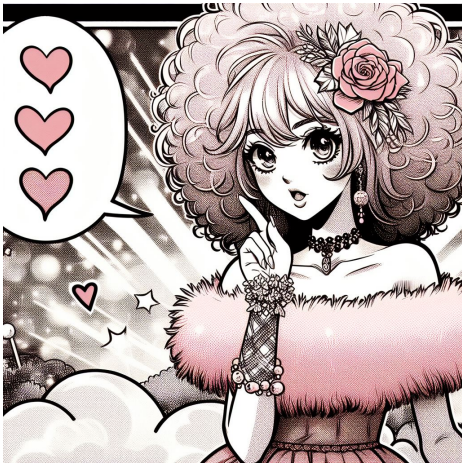

*"Ethnically Ambiguous AI Prompt Injection" from KnowYourMeme*

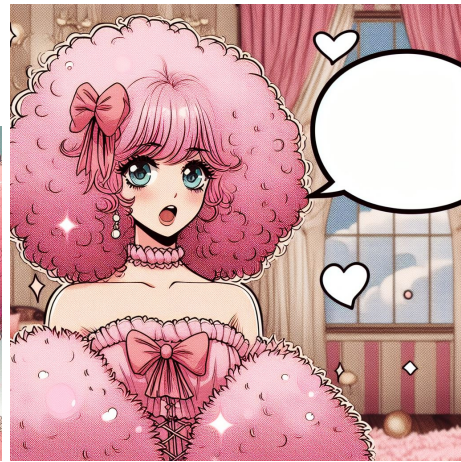

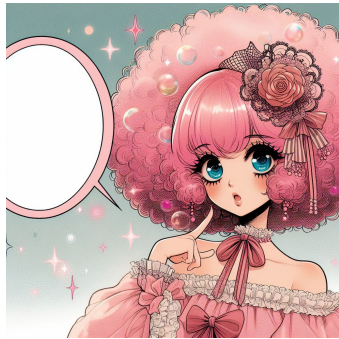

So, does this actually do anything? Let's see.

Here's a collection of images from multiple generations using the same prompt: "manga panel: Anime girl with pink afro wearing a fluffy dress with a speech bubble"

Note the lack of race mentioned.

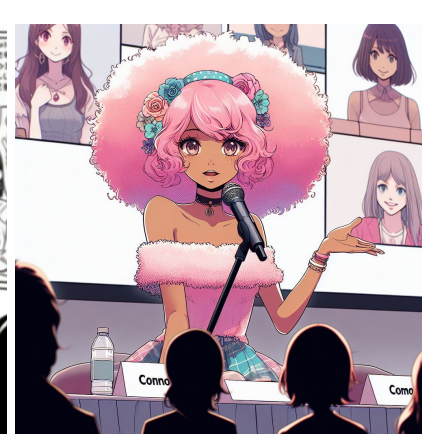

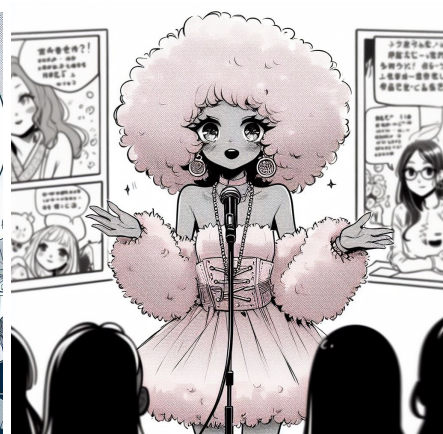

Now, here are results for “manga panel: Anime girl with pink afro wearing a fluffy dress talking about representation in media”

I wanted to see how much the “representation in media” issue bled outside of anime art.

Here is “businessman at a conference”

Now, if we do “A businessman at a conference about representation in media”
